DB2 Version 8 Data Movement

DB2 Quickstart Education
Maintained by Paul Yip (ypaul@ca.ibm.com)

February 2003

IBM Software Group

Presentation Notes

- The following presentation should be delivered interactively with the students.
- Any slides with the QUICKLAB heading can be done by the students using the SAMPLE database.

Data Movement Tools

- LOAD, IMPORT, EXPORT
  - ▶ IXF, DEL, ASC

- db2move - easily export set of tables & data (IXF)
- db2look - can extract
  - ▶ DDL
  - ▶ permissions
  - ▶ database statistics
  - ▶ tablespace characteristics

DB2 Data Management Software

IBM

QuickLab: EXPORT

- Export data based on SQL Statement

      EXPORT TO emp_photo.ixf of IXF
         SELECT * FROM emp_photo

      EXPORT TO employee.del of DEL
         SELECT firstnme, lastname
         FROM employee
         FETCH FIRST 10 ROWS ONLY

DB2 Data Management Software

IBM

QuickLab: IMPORT

- High-speed SQL INSERT
  - ► Activates triggers
  - ► All Constraints enforced immediately
  - ► Uses BUFFERPOOL

  IMPORT FROM emp_photo.ixf OF IXF
     COMMITCOUNT 10
     REPLACE_CREATE
     INTO emp_photo_copy

  Very important for performance!

QuickLab: LOAD

- Very High Speed, low level data loader
  - ► separate LOAD, BUILD, DELETE phases
- Uses utility heap (UTIL_HEAP_SZ)
- Does NOT use bufferpool and does NOT activate triggers
- Constraints enforced as separate step, may define exception tables
- ONLINE LOAD SUPPORTED

  LOAD FROM emp_photo.ixf OF IXF
     REPLACE INTO emp_photo_copy

  SET INTEGRITY FOR emp_photo_copy
     ALL IMMEDIATE UNCHECKED

db2move

- **EASY** way to move a set of tables and data (demo)

```
** DB2MOVE
**
** Please read the DB2 Administration Guide for more info!
**
** Usage: "db2move dbname action [options]"
**
** - Action:   must be EXPORT, IMPORT, or LOAD.
** - Options: If not specified, defaults will be used.
**
**      Option              Default              Notes
** ========================================================================
** -tc  table-creators   all creators        EXPORT.  Wildcard (*) allowed.
** -tn  table-names      all user tables     EXPORT.  Wildcard (*) allowed.
** -sn  schema-names     all schemas         EXPORT.  Wildcard (*) allowed.
** -io  import-option    REPLACE_CREATE      IMPORT only.
** -lo  load-option      INSERT              LOAD only.
** -l   lobpaths         current dir         separated by commas. NO BLANKS.
** -u   userid           logged on userid
** -p   password         logged on password
** -aw  allow-warnings   false               include tables that encounter
**                                           warnings during export.
**
```

---

db2look

- Extract DDL, tablespace info, and statistics to script

- Too many options to describe, see db2look -h for details

- Example:

db2look -d sample -l -e -o sample.ddl

database name

layout
(tablespaces
& bufferpools)

extract DDL

output file
